<b>Registered professional visits</b>	3,513
<b>Expected number of exhibitors in 2025 edition</b>	200

## WHY TURKMENTEL?

Turkmenistan is one of the fastest-growing markets in Central Asia, driven by increasing public investments in telecommunications, digital infrastructure, and smart city technologies. Within the scope of state-supported projects, fiber infrastructure, mobile networks, data centers, and the digitalization of public services are among the priority investment areas.

There is particularly strong demand in the country for:

- Broadband internet and fiber infrastructure
- Mobile operator technologies and 4G/5G solutions
- Satellite and broadcasting systems
  - Data centers and cybersecurity
  - Smart city and IoT projects
- Payment systems and fintech infrastructures

Thanks to its strategic location, Turkmenistan serves as a regional trade and technology bridge, providing access to the markets of Central Asia, the Caspian Region, Russia, Iran, and the Caucasus.

Turkmentel Exhibition brings together government decision-makers, operators, and technology providers, offering exhibitors direct access to buyers, government projects, local partners, and new market opportunities, making it the most effective commercial gateway to enter the Turkmen market.
